

AHMAD FAUZAN

Bekasi, Jawa Barat, Indonesia | (62) 81292674823 | ahmad.fauzan.9922@gmail.com

Technical Consultant with 3+ years of experience delivering enterprise software, analytics, ERP, and Generative AI solutions across Finance, Manufacturing, Industrial Estate, and Public Service sectors. Progressed from software development and technical leadership roles into product engineering, with hands-on experience in solution architecture, ERP implementation, fraud detection, graph databases, and AI-powered applications. Skilled in translating business requirements into scalable and maintainable technology solutions.

EXPERIENCE

Januari 2026 - Present

Head Product Engineer | PT.Bizinfosys Servisindo

- Lead product engineering initiatives across ERP platforms, including custom-built HRIS solutions developed with Laravel and Odoo-based ERP implementations for manufacturing, textile, garment, and industrial estate sectors.
- Define product architecture, technology stack selection, and engineering standards to ensure scalability, maintainability, and long-term product sustainability.
- Design and oversee the development of a custom HRIS platform covering workforce management, attendance, payroll, and employee lifecycle processes.
- Conduct infrastructure sizing, capacity planning, deployment architecture design, and licensing cost estimation to support product implementation and operational efficiency.
- Establish CI/CD pipelines, deployment automation strategies, and engineering best practices to improve software delivery quality and reliability.
- Develop pre-configured Odoo deployment frameworks and implementation accelerators to standardize project delivery and reduce implementation effort.

September 2025 – Desember 2025

Senior Technical Consultant | PT. Inmotion Inovasi Teknologi (3 Dolphin)

- Delivered Generative AI solutions for enterprise clients by configuring, customizing, and optimizing existing AI products to meet business and operational requirements.
- Implemented Retrieval-Augmented Generation (RAG) capabilities using Qwen Large Language Models (LLM), improving the relevance and contextual accuracy of AI-generated responses.
- Developed and enhanced Python-based backend services to support AI workflows, document processing, knowledge retrieval, and system integrations.
- Designed prompt engineering strategies tailored to client use cases, improving response quality, consistency, and user experience.
- Collaborated directly with clients and stakeholders to gather requirements, conduct solution workshops, and ensure successful implementation of Generative AI initiatives.
- Performed technical customization, troubleshooting, and performance optimization of AI solutions during implementation and deployment phases.

February 2024 – September 2025

Technical Consultant (Lead Software Developer) | PT. Digital Data Integrasi

- Led end-to-end software development initiatives, overseeing technical direction, solution architecture, and delivery execution for enterprise-scale projects.
- Served as the primary technical lead in the development of fraud detection, anti-money laundering (AML), and graph analytics solutions utilizing NestJS, React, Neo4j, and real-time data processing technologies.
- Spearheaded the development of an AI-powered Audit Management System leveraging Next.js, NestJS, Neo4j, Retrieval-Augmented Generation (RAG), and Large Language Models (LLM) to improve audit efficiency and decision-making.
- Designed scalable backend architectures, API strategies, authentication mechanisms, and deployment

approaches to support maintainable and secure enterprise applications.

- Collaborated directly with clients, business stakeholders, and project managers to gather requirements, define technical roadmaps, and align solution delivery with business objectives.
- Led development teams through technical design reviews, code reviews, implementation activities, and engineering best practices to ensure software quality and maintainability.

February 2023 – January 2024

Technical Consultant (Software Developer) | PT. Digital Data Integrasi

- Collaborated with business analysts and subject matter experts (SMEs) to translate business requirements into technical solutions across fraud detection, analytics, and data integration initiatives.
- Designed and implemented enterprise data integration pipelines to synchronize Oracle Data Warehouse (DWH) data into Neo4j Graph Database, enabling Customer 360 and Customer Journey analytics capabilities.
- Developed backend services using Python and Flask to support fraud monitoring, automated notifications, and operational workflows.
- Built supporting applications and integrations, including React Native mobile solutions and business intelligence integrations with Tableau and Power BI.
- Participated in solution architecture discussions, technical reviews, and proof-of-concept (POC) implementations for enterprise clients across financial and public sectors.

EDUCATION

February 2023

Bachelor Science in Physics | State University of Jakarta GPA : 3.57

February 2022 – July 2022

Machine Learning Cohort | Bangkit Academy (Google, GoTo and Tokopedia) from Kampus Merdeka

SKILLS

- Programming Languages: JavaScript/TypeScript, Python, PHP, Java, Golang (Personal Projects)
- Backend Technologies: NestJS, FastAPI, Flask, Laravel, Spring Boot
- Frontend Technologies: React.js, Next.js
- Databases & Storage: PostgreSQL, MySQL, Neo4j, Redis, Qdrant, MinIO
- Cloud Platforms: Google Cloud Platform (GCP), Amazon Web Services (AWS)
- DevOps & Deployment: Docker, Nginx, Github Actions
- AI Technologies: Large Language Models (LLM), Retrieval-Augmented Generation (RAG), Prompt Engineering, Vector Search, Knowledge Graph
- Tools & Collaboration: Git, Jira

PROJECT

IViA AI Dashboard | Astra Finance & Astra Integrasi Digital – 2025

- Developed AI-powered analytics capabilities for Power BI dashboards by integrating Qwen3 Large Language Models (LLM) with enterprise reporting and monitoring systems.
- Implemented secure integration between LLM services and Power BI through Microsoft Service Principal authentication, enabling controlled access to organizational data assets.
- Designed and optimized system prompts, personas, and conversational workflows tailored to business users and analytical requirements.
- Developed Retrieval-Augmented Generation (RAG) mechanisms leveraging dashboard metadata, business definitions, and reporting schemas to improve contextual understanding and response accuracy.
- Built intelligent monitoring and notification workflows using LLM pipelines to generate proactive alerts and

business insights from dashboard activities and operational metrics.

- Collaborated with stakeholders to translate reporting requirements into AI-assisted analytical experiences, enabling faster access to insights and decision support.

Data Analytic and Operational Monitoring | PT. Kawasan Industri Terpadu Batang (KITB) – 2025

- Led the design and implementation of digitalization initiatives across multiple business functions, transforming manual operational processes into centralized, data-driven workflows.
- Led the digitalization initiative across General Affairs, Operational, Risk Management, and Finance divisions through the development of operational applications and analytical dashboards.
- Designed and developed executive dashboards and analytical reporting solutions for Corporate Finance, General Affairs, and Operational divisions, enabling real-time monitoring and data-driven decision-making.
- Established CI/CD pipelines and deployment automation processes to improve release consistency, system reliability, and development efficiency.
- Implemented Single Sign-On (SSO) integration using Microsoft Azure Entra ID, providing centralized authentication and enhanced security across internal applications.
- Collaborated closely with business stakeholders, project managers and user per division to identify operational challenges, gather requirements, and deliver practical digital solutions aligned with organizational objectives.

LLM Chatbot Service | PT. Pegadaian – 2025

- Developed an LLM-based Chatbot service using Flask (Python) to assist in advanced fraud and Anti-Money Laundry (AML) analytics
- Implemented a Retrieval-Augmented Generation (RAG) pipeline with Gemini Flash 2.5, integrated with Neo4j to enable context-aware responses based on graph relationships
- Optimized prompt engineering and knowledge retrieval to ensure accurate, compliant, and real-time conversational insights aligned with financial regulation

Fraud Detection and Anti-Money Laundering System | PT. Pegadaian – 2023

- Implemented an end-to-end fraud detection and anti-money laundering (AML) solution using Angular for the frontend and Spring Boot for the backend, designed to support enterprise compliance workflows
- Developed a role-based access control (RBAC) system tailored for internal audit and compliance division (SPI & Compliance), enabling granular access and secure workflow management
- Built an alert and notification module to identify anomalies and trigger near real-time fraud and AML incidents
